Mental Health

STATE MENTAL HOSPITALS: 1974

The downward trend in the number of State mental hospital patients continued during the year as 18,709 patients were listed on the books on June 30, 1974. These 18,709 patients represent a decrease of 35,610 from the peak of 54,319 in 1966, and is the smallest number on the books since 1932. (Table 1)

Of the 18,709 patients listed on the books on June 30, 1974, 16,307 were in residence and 2,402 were on leave of absence. Compared to June 30, 1973, there were 2,566 fewer patients in residence and 638 fewer on leave, for a total decrease of 3,204 patients on the books.

Female patients again outnumbered males. At the end of the fiscal year they accounted for 51% of the resident patients, 49% of those on leave, and 51% of all patients on the books. (Table 2)

Psychotic disorders (predominantly schizophrenic reactions) continued to be the prevailing diagnoses of resident patients, with 58% of the year-end residents suffering from such disorders. As in recent years, the majority (55%) of resident patients were afflicted with schizophrenic reactions. (Table 3)

At the end of the fiscal year, the prevailing mental disorders of the resident population were similar to those at the beginning of the year, with schizophrenic reactions at 55%, and diseases of senium remained the same at 3%. Patients suffering from manic depressive reactions and from other psychotic disorders remained the same at 3%. The schizophrenic patients continued to account for much of the movement during the year, comprising 47% of all admissions, 69% of placements on and 76% of returns from leave, 47% of transfers in and 47% of transfers out among the hospitals and institutions in the State system. The percentage of alcoholics admitted during the fiscal year (12%) was identical to that of the last year. Diseases of the senium continued to be the predominant causes of death in hospitals, remaining the same at 38%. (Table 4)

The percentage distribution of residents by age group varied slightly from the first to the last day of the fiscal year. As in the last three years, patients 45 years of age and older accounted for 74% of the resident population at the end of the year. On the other hand, patients under 45 years of age continued to account for half or more of the year's movement of residents except for transfers in and for transfers out among the hospitals and institutions in the State system and deaths in the hospitals. There has been an increase in the deaths in hospitals of patients 65 years of age or older from 69% in 1973 to 71% in 1974. (Table 5)
